

Solution Brief

Insight Enterprise Networking Jumpstart Service

Designing large scale solutions to enable digital transformation

Large organisations demand extensive infrastructure, which supports their business operations allowing end-users to access the data and services they require to drive the business forwards. These networks have become increasingly more complex as they are asked to support more diverse applications and ever more users spanning, in some cases, multi-building campus environments whilst providing 24/7 uptime and reliability.

Business Challenge

With the long refresh cycle of networking infrastructure, operational teams often face considerable challenges in keeping existing infrastructure running and planning and developing upgrades when the time comes for large scale replacement. Being infrastructure- rich and resource-poor can present another significant challenge.

Why Insight

- Decades of experience. We have helped organisations transform IT service delivery, operations, and resources to meet business challenges for more than 30 years.
- Deep expertise. Our 1,500+ services professionals carry more than 3,000 technical certifications, including all major cloud, storage, data protection, networking, and security technologies.
- Strategic partnerships with leading technology manufacturers with whom we work closely.

Our Solution

The Enterprise Networking Jumpstart is intended to help our clients access experience, skill, and resource to drive these projects forward and assist their resources in architecting, designing and deploying a next-generation infrastructure to support their business applications.

All Jumpstart engagements are structured to achieve success, and during the delivery of the package, the customer can expect:

By helping you define a manageable and meaningful initial security posture, our expert consultants set you on the right path to protect your overall attack surface and give you the insights to grow your security to meet new challenges.

- Discovery workshop with Insight consultants designed to capture detailed requirements from all stakeholders
- High-Level Design documents showing the proposed design and mapping it to requirements
- Design workshop to explore detailed design decisions and gather the low-level information required to ensure the solution is functional and effective
- Low-Level Design Document showing the details required to configure the solution successfully
- Configuration templates
- Implementation Plans
- Testing Framework

Business outcomes

Access to advanced skills and experience clients may not have within their organisation or may not have time to develop

Accelerated adoption of new technology

Knowledge that the planning and design of a new solution is in a safe pair of hands

Access to Insight deployment services to subsequently physically deploy the designed solution if desired

Vendor agnostic services across multiple leading networking solutions

Testing Framework

About Insight

At Insight, we define, architect, implement and manage Insight Intelligent Technology Solutions that help your organisation run smarter. We will work with you to maximise your technology investments, empower your workforce to work smarter, optimise your business and create meaningful experiences.
